

## METALLIC DOME FOR INTERNAL USE

This dome is built to be installed at internal environments made exclusively to planetary use, consequently fixed construction. The manufacturing is done by semispherical sections, solution that allows the transportation and entry to destination to install directly in the final place.

The assembly is made attaching the metallic sheet and the dome structure. It needs from 3 to 6 days of work to do the installation depending on the diameter. Built with

galvanized iron structure and covered internally with thin sheets made of aluminum, after being assembled it comes treated and finally painted with a certified product of opaque color appropriate for an optimum projection.

Externally the structural part has an esthetic with a color that can be chosen by the client. About the sheets treated and pre-painted with a high resistance painting. Once the dome is built is fixed according to the environment with chains or supports fixed to the floor.
